Gotive shows wireless communicators at CeBIT 2003

The company Gotive a.s. is for a second time exhibiting at CeBIT trade fair, that takes place in Hannover, Germany from March 12 – 19, 2003, in order to present its innovative visions and devices for wireless enterprise mobile solutions.

About Company

Gotive a.s. (www.gotive.com) develops, markets and sells highly innovative wireless enterprise communicators, or WECs. WECs are designed for use in any application in which mobile users need to collect, manage and transfer data remotely from the users' fixed-line place of work. The proliferation of mobile voice and data networks forms a platform on which handheld hardware can run to fulfil varied requirements of such vertical markets as remote logistics, transportation, field services, utilities, retail on the move, public safety, forestry, defence and others. Gotive supplies customers with excellent "fit-for-purpose" products featuring state-of-the-art design, product customisation, high-quality manufacturing and fast logistics. Its operations base in Central Europe (Bratislava and Vienna) offers customers many advantages, including accessibility and price competitiveness as well as a comprehensive understanding of market needs.

About Products

The first product from its product range, Gotive WEC H41, combines the functions of a handheld computer, a mobile phone, a localization/navigation device (thanks to its ability to receive GPS signals) and a barcode reader in a single mobile handset. The open architecture of Gotive products additionally enables them to accommodate optional smart card and/or magnetic strip readers, a printer and a camera – depending on the specific market's needs. Gotive H41 has been developed for users for whom finger rather than stylus operation is more appropriate for a mobile device. Finger operable QWERTY touch screen keyboard and programmable Action Keys deliver true "anywhere" usability and one hand operation. Gotive H41 is sealed for protection against windblown rain and dust (IP 54 Standard compliant), and is able to withstand multiple drops on a hard surface. Gotive H41 is built upon Windows CE.NET operating system.

Customisation

Gotive offers an innovative ergonomic design, which represents a synergic solution of specific human factors coming into play within customer's mobile enterprise solution and the requirements on product's functionality. Gotive designs the products to maximize usability and minimize strain on mobile workers.

Every Gotive product is open for customisation. It allows the user to choose the right configuration – to lower the cost by removing features, or to add more value by means of extras. Customisation may require development of a specific product, or maybe just adding a logo (branding) or changing the colour of the case. The case colour is fully customisable according to the colour scheme required by the customer.
