Product Configuration:

**H42.T**

Project name: Pocketsil

Description of the project:

This project has for interest the implementation of a communication system, allowing isolated child or adult by a handicap, to interact with his environment.

Through a portable speech synthesis, the user must be able to participate into a discussion, to tend to a normal social life.

Fonctionality:

- The Pocketsil is a full solution composed of:
- a high performance speech synthesis ( Acapela).
  - a software solution helping for oral expression.
  - a rugged device with a large touch sensitive screen.

Country/geographical area: Belgique/Europe
