Health e-card mobile client

smartAID

NEW!

End user:

Healthcare Professionals

Configuration of Gotive systems deployed:

H42.T.M.SC

Project development:

- Start of the project
- Pilots
- Shipments

- Jun 06
- May 07
- Okt 07

Functionality:

smartAID is an intelligent and easy to handle mobile client for the Austrian e-card (health card) system. By means of distinctive, new developed Framework for Windows CE devices the application offers high data security, easy maintenance and safe communication over GPRS. The application is provided constantly after SOA principles and can be easily adapted to individual requirements and new needs, with high measure of economy and investment security. An operation-optimized input system consisting of a large, finger-operated keyboard, scrollable windows and tabs, let the 640x240 pixel large screen appear substantially larger, allowing an input of even voluminous data fast and comfortably. Thanks to the rugged ergonomic design smartAID is an ideal tool even under the rough working conditions of first aid and emergency units.

Country/geographical area: **Austria**
