

# H42: Case Study

## Healthcare

Rescue service

End user:

**118 Service**

Configuration of Gotive systems deployed:

**Gotive H41RS**

Project development:

- Start of the project
- Finalisation of SW
- Pilots
- Shipments

Dec 2004  
Apr 2005  
May 2005  
Sep 2005

Functionality:

- The need of the end user was to manage the whole range of activities occurring during the daily duties of each rescue team.
- In fact, ambulances have all the functionalities necessary for taking care of life of patients and it is possible to connect those instruments to an external device.
- Gotive H41RS are ideal devices thanks to its communication options and its large screen, perfectly fitting those requirements.
- Gotive H41RS are used to collect data on ambulances and communicate with central station of 118 – the national rescue service – through the phone embedded on the van.
- 41 units of Gotive H41RS have been shipped till Dec 2005 to complete the project.

Country/geographical area: **Italy/Sardinia**
