

H42: Case Study

Logistics & transportation

Container Logistics Management

© 2001 - 2007 www.gotive.com

End user:

Panama Ports Company

Configuration of Gotive systems deployed:
H41 I.W,B, H41 SDS

Phases of the project:

- Start of the project July 03
- Pilot testing August 03
- Decision for Gotive April 04
- Entregas Q4 04

Description of the project:

The Gotive H41 communicator with integrated WLAN 802.11b is connected with the system of management of the containers in Panama Port using emulation application. Thanks to the excellent legibility of the screen and battery performance, the operators can use the terminal without necessity of changing the battery all of their working time. An application has been created to enable the user to perform all the processes for situation, pick-up and billing of the containers in the real-time directly on the handheld unit while moving in the paths among the containers. Michael Hernandez, Technical manager of Panama Port, says: *"Thanks to Gotive screen and the complete choice of communication options, the system allows us to manage the process of loading and unloading in real time, reducing the waiting times and generating satisfaction of our customers"*.

Country/Geographical area: Panamá
