Project description:

Being one of the biggest actors in the military industry, SAGEM wanted to improve its parcel follow-up in transit in Montluçon, a highly technological area. Indeed, real time parcels traceability and internal transits optimisation were important stakes for the Military Equipment Manufacturer.

The global solution that has been chosen by Sagem engineers was the Gotive device and the mobile solution "Easy-Tracing.com" provided by AJILIS.

Easily usable by the operators (pleasant navigation system, easy synchronisation), quick deployment (full web), this innovative integrated solution permitted to SAGEM to guarantee the precision of the delivery and to optimise its internal organization, improving the service to its customers.

Country: France
