

# H42: Case Study **NEW!**

## Warehousing

Warehouse management

**End user:**

**DISTRABI SL**

**Configuration of Gotive systems deployed:**

**H42TWB, Custom Pistol Grip**

**Key milestones:**

- Start of the project November 2006
- Pilot & Testing December 2006
- First installations March 2007
- Shipments Sept – December 2007

**Functionality:**

The company DISTRABI needed a logistic solution and a trace solution to control the quality of the products, the origin, etc.

The requirements on the solution was to be very visual, easy to use and utilise a big display to include all the information needed for the customer.

The integrator PARC Informatica developed a solution on H42, because it provides a perfect display with a TFT quality and also an ideal combination of wireless communication (802.11b/g) and barcode scanner. Optionally, the attachable rotatory gun grip makes the intensive scanning and picking actions more effective and easier for the users. Furthermore, the modularity of H42 will allow to implement more communication options, like GPRS or GPS in the future and this way increase the radius of action.

**Country/geographical area: Spain & Portugal**
